JNDC ニュース，No.21 (1971)

The present study is based on the data published in the CCDN (NW-10) newsletter. It contains $\sigma(n,\gamma)$ values for stable nuclei with $32 \leq Z \leq 66$. The energy range is $1 \text{ keV} - 10 \text{ MeV}$ for $\sigma(n,\gamma)$ values.

Section I is divided into three parts: Section I contains the evaluation data for $\bar{D}_{\text{obs}}, \bar{I}_{\gamma}, a_c$ for each nucleus. Section II contains the tables of parameters for $\sigma(n,\gamma)$ values for In, I-127, Ta-181, U-235.

Section III contains graphs of isotopic and elemental cross sections. The graphs are plotted for the energy range of $1 \text{ keV} - 10 \text{ MeV}$, and the data are compared with available experimental data. The graphs are useful for further research and comparison with experimental data.
