

## MEMORANDUM OF AGREEMENT

Between the Reprocessing and Recycle Technology Division of the Atomic Energy Society of Japan (**RRTD/AESJ**) and the European Nuclear Society (**ENS**)

Representatives of RRTD and ENS have reviewed the areas in which cooperation between the two respective organisations would be mutually beneficial,

Taking account of the fact that the ENS is a grouping of national societies and, as such, is entitled to report on its own activities only, it has been agreed that the two organisations enter into a formal Memorandum of Agreement (MOA) on cooperation defined as follows:

### PURPOSE

The purpose of cooperation between RRTD and ENS is to foster **the international development of science and engineering** related to the **nuclear fuel cycle**.

### AREAS of COOPERATION

The two organisations will cooperate in the following areas:

1. Coordination and promotion of **technical meetings** sponsored by each organisation. Each organisation agrees to post the technical meetings notified by the other on its web site and to provide links to meeting information and registration materials from their web sites. For this purpose, information will be exchanged between RRTD and ENS Meetings staff/Secretary General.
2. **Special lectures or presentations given by distinguished travellers** as arranged by the organisation in the host country
3. Sharing ideas and information with respect to **public education** about the nuclear fuel cycle. The communication channel for this purpose will be between RRTD and the Chairperson of the ENS Nuclear Information Committee Europe (NICE), with copy to the ENS Secretary General.
4. Sharing ideas and information with respect to **encouraging capable students** to choose a career in the nuclear field. The communication channel for this purpose will be between RRTD and the Chairperson of the ENS Young Generation Network (YGN), with copy to the ENS Secretary General.

### CANCELLATION

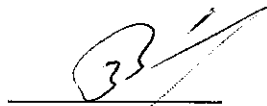

This Memorandum of Agreement is automatically cancelled one year after written notification by either organisation.

## AMENDMENTS

Any amendments to this Memorandum of Agreement must be agreed to by both ENS and RRTD in writing.

On behalf of our respective organisations, we accept the terms of this MOA on cooperation to foster the development of the nuclear fuel cycle.
